

Discussion on Computer Features and Support

We have had many requests for faster computers with more features. As many of you know the most common operating systems of Windows has evolved over the years as well as the type of peripheral communications and PC motherboards. Your existing test frame electronics and computer boards known as ADC uses an ISA computer slot that is no longer supported by most computer manufacturers. Instru-Met can and will support these systems with our inventory of parts and computers. We can offer limited upgrades on these systems. We can also offer an electronics, computer and software upgrade that will use USB II communication and Windows VISTA software.

These systems are able to be upgraded "in the field" without the need to return the test frame to Instru-Met.

We will continue to service and maintain these frames to keep you current with all technologies.

Thank you for this opportunity.
